

Y4 Week Three Challenge

Grow a sunflower

We challenge you to grow the biggest sunflower you can! You will need to take care of it until September when it will be fully grown. Perhaps you could keep a brief diary of how it is growing - draw a table and record how many days it takes to germinate. Then you could record how tall it is each week. In September you can take a photo of you and your sunflower telling us how tall it got.

If you like you can follow the link below for a national competition which helps to raise money for diabetes by growing enormous sunflowers. The tallest one was 3.8m!
