

Air Rocket Investigation – Rocket Template

Assembly instructions

1. Cut out the fuselage (rectangle) and fins. Cut along the dotted lines on the fins.
2. Roll the rectangle length-wise, and wrap around a pencil. It should form a cylinder. Tape the rectangle. Be careful not stick the cylinder to the pencil!
3. Using the point of the pencil, twist the top of the cylinder into a nose cone. Wrap a small amount of masking tape on the nose cone to keep its shape and to ensure it is airtight.
4. Stick either 3 or 4 fins at the base of the rocket. Fold the flaps in alternate directions and stick them with either masking tape or double sided sticky tape to ensure they stay securely attached to the fuselage.
5. Take the completed rocket off the pencil, and slide over a drinking straw. It should be ready for launch!
